We are developing a comprehensive guide to allow Padma | Unlimited users to become familiar with the platform and its tools.

This documentation is in the process of development and we work hard to get it ready as soon as possible.

CHAPTER 1

Installation

Follow next easy steps to get our **forever free Theme Builder** available on your WordPress installation.

1. Go to <https://www.padmaunlimited.com/> and click the **Download »** Button.
2. Access your **WordPress Dashboard**. Select **Appearance/ Themes** in the main menu.

image description here

3. Press the **Add** new button.
image description here

enter

4. Press the **Upload Theme** button.
image description here
5. Press **Choose File** button, locate and select the the folder where you downloaded **Padma | unlimited** zip file.
If you have a theme in a .zip format, you may install it by uploading it here.

image description here

enter

6. Select the downloaded file and Press **open**.

1.1 Security Considerations

Padma Unlimited Theme has a powerful feature that allows the execution of functions and PHP code within certain blocks, however if you wish you can disable this feature by adding:

```
define ('PADMA_DISABLE_PHP_PARSING', false);
```

To your wp-config.php

1.2 Recommended server settings

Padma | Unlimited may work without the values recommend below, but is strongly recommended adjust these values to meet this numbers.

- Padma | Unlimited require PHP 7+.
- PHP Post Max Size of 32M or higher. Typically, the default value for this is 8M. If you do not manage your own server, you will need to contact your host company support to determine how to increase this value. Probably your web host may have to do this change.
- PHP Memory Limit of 256M. Typically, the default value is 64M. If you do not manage your own server, you will need to contact your host company support to determine how to increase this value. The web host support department may have to do this change.

CHAPTER 2

First Steps
